

Bad News

The air you breathe is polluted.
Especially now, every breath you take contains
a host of airborne contaminants. Breathing in
toxins is bad for your family's health.

Good News

We can help.

Austin Air cleaners filter out 99.97% of all airborne
particulate matter larger than 0.3 microns
(that includes mold spores, tobacco smoke, pet
dander, and dust mites). All of these things
that make it hard to breathe.

Breathe easy.

Austin Air
for life.
